

# APCO EXTRA VALUE!

## 25 Year Extended and Expanded Warranty Coverage

- **Extended labor warranty!**
- **Expanded liner warranty coverage includes fading, rips, tears,**
  - **chemical damage, punctures, and stains!**
  - **In addition to manufacturers warranty!**
- **In writing – not just an unenforceable verbal promise!**

### AQUADOR™ Skimmer Faceplates

- **Saves Work, Time, & Money**
- **Saves on replacement chemicals**
- **Saves thousands of gallons of water a year**

Aquador™ skimmer covers are like Tupperware lids for your pool skimmer. This closure device saves time and money when you winterize your pool. Just snap on the freeze-proof plastic cover. Your skimmer is now protected from freeze damage. Of course you still need to winterize your skimmer and pipes as usual. But with Aquador™ there's no need for costly, and time consuming water drain downs in the fall, and the cover stays flexible to -80 degrees. Once you have an Aquador™ installed, you'll never have to drain your pool again to winterize it.

*With few exceptions, the Aquador must be installed with a new liner. This is due to the risks anytime a faceplate is removed. These risks increase with the liners age.*

Beadlock installed in a section of tracking

## BEADLOCK

### (Liner bead wedge lock)

- **Saves unsightly liner sags**
- **Saves on costly service calls**
- **Saves cleaning dirt from track**
- **Neat, clean finished look**

Beadlock is a small vinyl "T" shaped molding. It is sized to fit into the gap between the liner bead and the top of the tracking after the liner has been installed. When installed, bead lock helps prevent the liner from coming out of the tracking. Not every pool requires bead lock, unfortunately you won't know if it is needed until your liner comes out. Once the liner has come out of the tracking, depending on the age and condition of the liner, it may or may not be able to be re-installed. If repairable, it may cost several hundred dollars to fix, and require partially draining the pool. If the bead cannot be reinstalled due to the liners condition, you either have to live with it sagging down, or replace the liner. If you or anyone you know has ever experienced this, you know how frustrating it can be. Beadlock helps prevent this 90% of the time over the life of the liner!

**Note: Aquador faceplates and beadlock are available to fit most inground pools. If bead lock or aquador faceplates are available to be installed properly for your pool they will be included.**
